The new heavy duty Hozelock Ultra Metal Garden Pump gives mains pressure and convenience when drawing water from a butt or tank, taking all the hard work out of water recycling

Hozelock's Flood Pump will auto-activate in an area prone to flooding

## NEW HOZELOCK FLOOD AND RECYCLING PUMPS COMBAT ENVIRONMENTAL EXTREMES

Following the environmental extremes of recent years, Hozelock have introduced new pumps to help homeowners to cope with both flooding and drought. The Flood Pump extracts dirty water from inundated areas in the home or garden while the heavy duty Ultra Metal Garden Pump recycles stored water for any irrigation, outdoor cleaning or hard landscaping task.

Priced at just £39.99 (inc VAT) the new Hozelock **Flood Pump** is a self-priming mains powered device capable of moving up to 6,000 litres of dirty water per hour. With the ability to handle solids up to 30mm in diameter, it can quickly clear flooded rooms, basements up to 6 metres below ground level, ponds, ditches and standing surface water.

Thanks to an auto on/off sensor, the Flood Pump can be left permanently in position in an area prone to flooding where it will be automatically activated by rising water and deactivated again when the water level has gone down.

It is supplied with a 10m cable and plug for safe, remote connection to the electricity supply and a stepped hose tail (25mm–40mm) to facilitate connection of a wide range of hose diameters.

The new **Ultra Metal Garden Pump** – with a stainless steel chamber for extra strength and reliability – is designed to meet the growing demand for irrigating gardens with stored water drawn from underground tanks or water butts.

Designed to take all the hard work out of recycling water, this heavy duty 3.5 bar pump generates sufficient pressure to operate any kind of irrigation equipment, including sprinkler systems, porous hose, drip irrigation systems and hand tools such as hose guns and lance sprays. In fact it generates sufficient pressure to power any two watering tools at the same time, without blockages thanks to an in-line filter which traps small particles.

Supplied with an integral check valve for easy priming and a 3m suction hose for instant access to deep reservoirs, the Ultra Metal Garden Pump kit costs just £89.99 (inc VAT).

Hozelock claim that their new pumps will appeal not only to householders who have experienced flooding or the risk of it but also to the growing number of gardeners now choosing to capture their run-off water – or grey water from the bathroom or domestic appliances – to storage tanks, above or below ground.

Also available are two pump accessories: Ultra Flex Maxi-Flow hose to maximise performance of the garden pump and Tricoflat 25mm super high-flow hose for quick removal of water.

The new Hozelock pumps are widely available from garden centres and DIY stores throughout the country. For further information call the Hozelock Helpline on 0121 313 1122 or visit [www.hozelock.com](http://www.hozelock.com).
